

iECHO - A digital platform to support the global Project ECHO movement

One place online for the entire community

What is iECHO

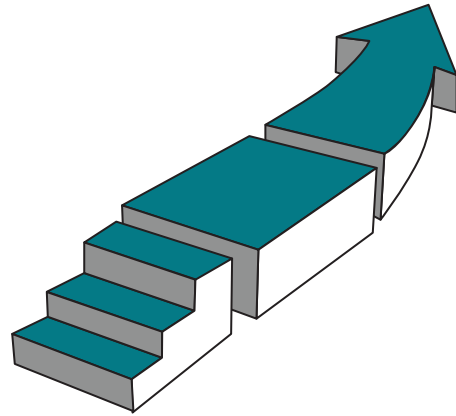

iECHO is Project ECHO's digital platform that empowers partners to efficiently set up, manage, and report on their programs. It connects participants from around the world, enabling them to discover, join, and engage in programs that enhance their knowledge through collaborative learning.

Available for free, iECHO helps ECHO partners achieve their mission with increased speed, scale, quality, and at a low cost.

Impact amplification via Project ECHO's trusted human network, leveraging iECHO

Objectives

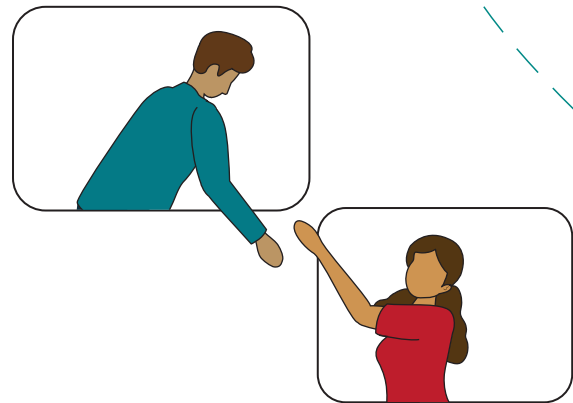

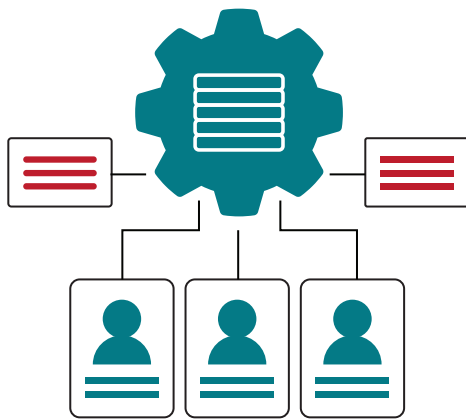

Eliminating barriers to participation in the ECHO movement

Ensuring that access to technology, language, or location is not a limitation in the adoption of ECHO worldwide.

Accelerating adoption and launch of new ECHOs

Making it faster for partners to get started with Project ECHO and giving them a head start in launching their ECHO programs.

Amplifying impact of operations and increasing productivity

Reducing the operational workload needed to run an ECHO program, through automation.

Empowering and building community throughout the ECHO movement

Allowing partners and participants to connect and grow the ECHO community and collaborate with each other.

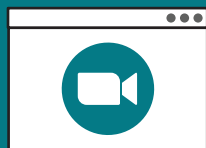

The iECHO platform allowed us to organize the session topics in such a way that both participants and organizers had access to consult the dates and times of each session. It offers direct access to Zoom, making it easier for organizers to start the session and for participants to access. We could get automatically generated certificates, which speeds up the process of issuing participant certificates. It allows you to designate the specialists and case presentation speakers and allows uploading documents and complementary material for the session.

UNIVERSIDAD PANAMERICANA

Key features

Videoconferencing built in

Integrated with Zoom, enabling easy participation.

Calendar and Reminders

Schedule sessions with integrated calendar and automated reminders.

Attendance and Reporting

Automated attendance tracking with advanced reporting.

Search and Discovery

Find relevant hubs and programs by focus area, country, or language.

User Roles and Permissions

Fine tuned access control and governance for hubs and programs.

Integrated Form Builder

Customizable feedback forms and assessments with data integration.

Connections and Networking

Integrated discussions forum facilitates community engagement.

Streamlined Content Storage

Upload, manage, and share learning resources in one place.

Accessibility

As a global and inclusive platform, iECHO has been built to support a wide variety of languages, focus areas, devices and internet connectivity. iECHO is available on the web (iecho.org), and as an iPhone and Android app in the following languages:

English	Português (BR)	Bahasa Melayu	and more..
Español	Français	Bahasa Indonesia	
Português (EU)	Tiếng Việt	Filipino	

The platform is fully customizable to add more languages.

“

The effectiveness of the iECHO platform in closing gaps in healthcare was evident from the beginning. The social service year physicians who presented cases in our mental health ECHO program using the platform, thought it was a dynamic, practical and balanced way to resolve their doubts regarding the care of psychiatric patients. Therefore, iECHO's effectiveness makes it a valuable tool to improve healthcare delivery and encourage continued professional development.
